

<https://softtrak.com/solutions/industry/first-nations>

Adagio is integrated with Ferrus Computers' ASAP applications for Membership Management, Housing, Social Assistance, Children & Family Services, and other operational application designed exclusively for First Nations communities. PayDirt Payroll is also integrated seamlessly.

ASAP Suite

(Aboriginal Statistical Assistance Programs)

<https://www.ferruscomputers.ca/>

Adagio is integrated with Ferrus Computers' ASAP applications for Membership Management, Housing, Social Assistance, Children & Family Services, and other operational application designed exclusively for First Nations communities. PayDirt Payroll is also integrated seamlessly.

Compatible with Sage 300.

Also compatible with existing Adagio suite that we currently use.

It appears there is an Azure Cloud solution for this as well.

Sage Intacct vs Sage 300

https://encrypted-vtbn2.gstatic.com/video?q=tbn:ANd9GcRI1A9_RcBVGtVyW_72cJNhbl3J4K3ephUsmipI0nm6fT-miwzB

Key Comparisons:

- **Deployment:** Sage Intacct is pure SaaS (cloud), whereas Sage 300 is traditionally on-premise, though it offers cloud-hosted versions.
- **Best For:** Intacct suits service-based or fast-growing businesses needing GAAP compliance and deep reporting. Sage 300 is ideal for distributors, manufacturers, or businesses with complex, non-financial operational needs.
- **Reporting:** Intacct features advanced, real-time, multi-dimensional dashboards. Sage 300 offers solid, but more traditional, operational reporting.
- **Costs:** Intacct follows a subscription model (predictable). Sage 300 often uses a perpetual license with annual maintenance, requiring higher upfront IT costs.
- **Maintenance:** Intacct handles all updates automatically. Sage 300 requires manual, often costly, upgrades and IT maintenance. 

Which to Choose?

- **Choose Sage Intacct if:** You need remote access, cloud-based software, automated processes, and advanced, real-time reporting.
- **Choose Sage 300 if:** You need heavy inventory management, complex operational workflows, and prefer a traditional, locally managed system.
